

# Eight Station Hand Washing Unit

## 👤 History

The Airy Transit Eight Sink Hand Washing Station or "sink trailer" was first introduced by Royal Restrooms in May of 2020 in response to the Covid-19 Pandemic. The Center for Disease Control (CDC) emphasizes on hand washing with soap and water for 20 seconds and then towel dry was the most effective way to prevent the spread of germs and Covid-19. Utilizing the sink trailer demonstrates a conscious effort by your organization or government to suppress the spread germs and viruses with a touch-less hand washing experience to keep patrons clean and safe.

## 🏢 Development

The sink trailer was developed with state-of-the-art products and services with end user experience and personal hygiene in mind. Utilizing products such as motion sensor faucets, paper towels and soap dispensers to achieve the highest degree of sanitation. Value-added service with two 40 inch Led WiFi enabled smart TV's located on each side for live streaming, informational purposes, maps, or even sponsorship/advertising.

### Tork PeakServe™ Products

The sink trailer utilizes the latest in product superiority to support a high traffic area usage and promote personal hygiene for all visitors.

Innovative features include:

Tork PeakServe™ Mini Continuous Hand Towel Dispenser is a high capacity towel system holding 1230 towels without interruption.

Tork Foam Skincare Dispenser with Intuition™ Sensor dispense the exact amount of antibacterial foam in a touch free environment. Up to 2000 foam soap portions can be dispensed without refill.

Tork Antibacterial Foam Soap is ideal for environments where extra sensitivity and hygiene is of upmost importance. The NSF E-2 soap is rated acceptable for use in food service and food preparation.

## 🏢 Placement and Uses

The best use of the sink trailer is to place the trailer in locations that are frequented by people or where large gatherings may occur. Promoting hand washing is still the single best weapon we have against the spread of germs and viruses. According to the Global Hand Washing Partnership, hand washing with soap is among the most effective and inexpensive ways to prevent diseases. A 1% shift in more more active hand washing practices would save trillions of dollars world wide caused by not washing your hands.
